

CORDVISION

Professional Film Gear

Instructions:

1. Print this page at 100% scale (printer setting).

2. Use a ruler (inch or cm) and measure the scale printed on the bottom right to ensure that the page is printed to proper scale. **It's very important that your ruler matches the scale exactly!** If the scale doesn't match with your ruler, adjust the printer's scale setting and re-print the page until it matches.

3. Cut out the measurement gauge.

4. Wrap it as tightly as you can around the focus ring of your lens starting with the end labeled "START".

5. The end marked with an arrow will line up with a number that corresponds to the gear that will fit your lens. If it falls right in-between two numbers, choose the smaller one.

6. If you have any questions or issues, send an e-mail to info@cordvision.com
